Introduction

About The CONFERENCE THEME

A disaster is indiscriminate in whom it affects, leaving the people to bear an inequitable amount of burden. Often it disrupts the continuity of the health care system leaving behind the vestige of a fragmented primary health infrastructure. Health care services in such formidable challenging situations are carried out by medical professionals, governmental and non-governmental organizations and ancillary health care workers. These services help to fortify and rebuild the misfortunate lives as a person, as a family and together as a community. Despite of implementation provision of effective health care service at any challenging situation is a vital issue. These catastrophic circumstances can emerge from nature, environment and man-made. For an example natural calamities can cause limitation in access to the basic fundamental needs for survival such as pure drinking water, food and shelter.

and also contribute in evolution and spreading of variety of infectious diseases like hepatitis A & E, enteric fever, dengue etc. and may tend to cause nutritional deficiency disorders in a colossal amount.

Man-made disaster like war, political violence, interpersonal violence such as child abuse and negligence, violence against intimate partners, elder abuse and homicide poses a major threat to the community. And gender-based violence also has reached epidemic proportions in some countries.

Health and health care disparities are seldom addressed in disaster response and recovery planning and dealt by the health care professionals not up to the level of gratification with their knowledge only gained by their personal experiences passed through generation to generation. Lacking of institutional or formal education regarding these emergencies impede and slow down the disaster recovery efforts.

This 1st International Scientific Conference focus on the theme "Providing Health Care Services in Challenging situation" will be a root in confronting and tackling future events.

In this Conference a huge number of renowned expertise of both national and international will share their knowledge and experience in multidisciplinary approach. It is also a great significance that this souvenir embellish with their abstract. These are categorise by patient care, medical education, disease prevention, biomedical research and critical cases.

Introduction ABOUT CHATTOGRAM City

Chittagong officially known as Chattogram is a major coastal city and financial centre in southeast Bangladesh. The city has a population of more than 2.5 million while the metropolitan area has a population of 4,009,423 in 2011, making it the second-largest city in the country. It is the capital of the eponymous District and Division. The city is located on the banks of the Karnaphuli River between Chittagong Hill Tracts and the Bay of Bengal. Much of Chittagong Division is located within the ecological Indo-Burma zone on the boundary of the India Plate and Burma Plate. This makes Chittagong the crossroads of the Indian subcontinent and Southeast Asia.

The natural harbour of Chittagong is an ancient gateway to the region of Bengal. It was noted as one of the largest Eastern ports by the Roman geographer Ptolemy in the 1st century. As part of the long seafaring tradition of the Bengali people, coastal Chittagong was settled and ruled by different regional kingdoms. Arab traders saw well-developed currency, banking and shipping in Chittagong during the 9th century. Early cosmopolitan Muslims established dominance over the port as an entrepôt for maritime trade, while Arakan, Bengal and Tripura competed for control of the wider hinterland. Muslim conquest took place in the 14th century. Chittagong became the principal port of the Bengal Sultanate. It was used by several leading medieval global explorers, including Ibn Battuta and Niccolò de' Conti. Later, Mrauk U, with assistance from Portuguese trading posts, gained control of the area. The Mughal conquest of Chittagong reestablished Bengali control and ushered an era of stability and trade. The city was renamed as Islamabad. This diverse history is reflected in the rural Chittagong dialect of Bengali, which has a nearly 50% Arabic-origin vocabulary, as well as Persian and Portuguese loanwords.

Ceded to the British East India Company in 1760, Chittagong became the chief port of Eastern Bengal and Assam under the British Raj, as well as a hub of railways. A notable anti-colonial uprising took place in 1930. It was an important base for Allied forces during the Burma Campaign in World War II. Rapid industrialization followed the war, as Chittagong became part of East Pakistan. During the Bangladesh Liberation War in 1971, Chittagong was site of the country's declaration of independence.

Modern Chittagong is an important economic hub in South Asia. It is home to the Chittagong Stock Exchange and many of Bangladesh's oldest and largest companies. The Port of Chittagong is the largest international seaport on the Bay of Bengal. It is the largest base of the Bangladesh Navy. Chittagong is reputed as a relatively clean city, but still confronts substantial logistical and socioeconomic problems. The mountainous hinterland of Chittagong is the most biodiverse region in Bangladesh, with 200 endemic plants and various critically endangered wildlife.
